

How to measure for a sidepull

#1— circumference of muzzle 1" above the corners of the mouth.

#2 — browband - behind the ear - across brow - to behind the other ear.

(measure from where you want the edge of the poll band to be)

#3— corner of mouth - over poll - to corner of mouth.

#4— throat-latch - from the poll under chin back up to the poll on the other side.

(measure where the throatlatch will lay)

A cloth measuring tape works best

Place the tape against the horse, do not pull tight

If possible let us know your horses breed and size. It helps us to double check the measurement numbers.
